| C95942 | TRANSPOSON | Jumping Gene;Jumping Genes;Transposable Element | A class of mobile genetic elements that can move from one genomic position to another. | Transposon |
| C816 | tRNA | Transfer RNA;Triplet Codon-Amino Acid Adaptor | A class of short adaptor RNAs that transfers a specific amino acid to a growing polypeptide chain at the ribosomal site of protein synthesis during translation. Each transfer RNA comprises a three-nucleotide sequence that is complementary to the triplet nucleotide coding sequence of an mRNA, conferring specificity to the amino acid being incorporated into the assembling protein. | Transfer RNA |

| C103375 | ADAM OTHER | | An analysis dataset that doesn't conform to a pre-defined ADaM dataset structure (e.g. ADSL, BDS or OCCDS). | CDISC Other ADaM Dataset |
| C103371 | BASIC DATA STRUCTURE | BDS | An ADaM BDS dataset contains one or more records per subject, per analysis parameter, per analysis time point. Variables include the value being analyzed (e.g., AVAL) and the description of the value being analyzed (e.g., PARAM). Other variables in the dataset provide more information about the value being analyzed (e.g., the subject identification) or describe and trace the derivation of it (e.g., DTYPE) or support the analysis of it (e.g., treatment variables, covariates). | CDISC Basic Data Structure Dataset |
| C103372 | EVENTS | | This SDTM class captures planned protocol milestones such as randomization and study completion, and occurrences, conditions, or incidents independent of planned study evaluations occurring during the trial (e.g., adverse events) or prior to the trial (e.g., medical history). | CDISC Events Class |
| C103373 | FINDINGS | | This SDTM class captures the observations resulting from planned evaluations to address specific tests or questions such as laboratory tests, ECG testing, and questions listed on questionnaires. | CDISC Findings Class |
| C135396 | FINDINGS ABOUT | | This SDTM class is a specialization of the findings general observation class. It is intended, as its name implies, to be used when collected data represent findings about an event or intervention that cannot be represented within an event or intervention record or as a supplemental qualifier to such a record. | CDISC Findings About Class |
| C132357 | INTEGRATED BASIC DATA STRUCTURE | IBDS | IBDS is the ADaM Model for the Integrated Basic Data Structure. The structure includes per pool as defined in the integrated SAP when multiple records per subject are included in integrated ADSL. | CDISC Integrated Basic Data Structure Dataset |
| C132358 | INTEGRATED OCCURRENCE DATA STRUCTURE | IOCCDS | IOCCDS is the ADaM Model for Integrated Occurrence Data structure. The structure includes per pool as defined in the integrated SAP when multiple records per subject are included in integrated ADSL. | CDISC Integrated Occurrence Data Structure Dataset |
| C132359 | INTEGRATED SUBJECT LEVEL | IADSL | IADSL is the ADaM Model for Integrated Subject Level Analysis Dataset. The structure is one record per subject per pool as defined in the integrated SAP. Multiple records per subject are required in an integrated ADSL dataset when any subject's data is used in more than one pool and the values for subject-level variables differ across pools. | CDISC Integrated Subject Level Dataset |
| C103374 | INTERVENTIONS | | This SDTM class captures investigational, therapeutic and other treatments that are administered to the subject (with some actual or expected physiological effect) either as specified by the study protocol (e.g., exposure to study drug), coincident with the study assessment period (e.g., concomitant medications), or self-administered by the subject (such as use of alcohol, tobacco, or caffeine). | CDISC Interventions Class |
| C123454 | OCCURRENCE DATA STRUCTURE | OCCDS | The Occurrence Data Structure (OCCDS) is the ADaM data structure for occurrence analysis. Occurrence analysis is the counting of subjects with a record or term, and often includes a structured hierarchy of dictionary coding categories. | CDISC Occurrence Data Structure |
| C103376 | RELATIONSHIP | | This SDTM class provides a means to link related records between datasets. It includes the RELREC and SUPPQUAL datasets. | CDISC Relationship Class |
| C103377 | SPECIAL PURPOSE | | This SDTM class contains a set of domains which do not conform to the Findings, Events or Interventions observation classes. The domains included are DM, CO, SE and SV. | CDISC Special Purpose Class |
| C147271 | STUDY REFERENCE | | This special purpose SDTM class contains further descriptions of study-specific identifiers that will be used in subject based domains. | CDISC Study Reference Class |
