NCI Code: C213530, Codelist extensible: Yes

C213530	MSSTRESC				
NCI Code	CDISC Submission Value	CDISC Synonym	CDISC Definition		NCI Preferred Term
C48658	INDETERMINATE	Inconclusive	Cannot distinguish between two or more possible values in the current context. (NCI)		Indeterminate
C85560	INTERMEDIATE	Intermediate	The growth of microorganisms may be inhibited by antimicrobials that approach usually attainable blood and tissue concentrations. The response rates may be lower than for susceptible isolates. This category also includes a buffer zone, which should prevent small, uncontrolled, technical factors from causing major discrepancies in interpretations, especially for drugs with narrow pharmacotoxicity margins.		Antimicrobial Intermediate Susceptibility Result
C85561	NONSUSCEPTIBLE	Non Susceptible	A category used for microorganisms that have only a susceptible interpretive category, but not an intermediate or resistant interpretive category (i.e., susceptible-only interpretive category). This category may be applied to new antimicrobial agents for which no resistant microorganisms have been encountered at the time the initial interpretive criteria are determined. Microorganisms that test with an MIC above or a zone measurement below the susceptible interpretive criteria are designated as nonsusceptible. A designation of nonsusceptible does not necessarily mean that a resistance mechanism(s) exists in the microorganism.		Antimicrobial Nonsusceptibility Result
C48660	NOT APPLICABLE	NA;Not Applicable	Determination of a value is not relevant in the current context. (NCI)		Not Applicable
C186207	NOT SUSCEPTIBLE		The growth of the microorganism is intermediate or resistant to an antimicrobial. This category is used when describing isolates that are above the susceptible interpretive category breakpoint as defined by a standards organization, and, when the "intermediate" breakpoint and the "resistant" breakpoint are defined but not applied; or when "intermediate" and "resistant" interpretive categories are merged/combined.		Antimicrobial Not Susceptible Result
C85562	RESISTANT	Resistant	The growth of microorganisms are not inhibited by the usually achievable concentrations of the antimicrobial agent with normal dosages, and/or microorganisms demonstrate MICs or zone diameters that fall in the range where specific microbial resistance mechanisms (e.g. Beta-lactamases) are likely, and clinical efficacy of the agent against the microorganism has not been reliably shown in treatment studies.		Antimicrobial Resistance Result
C85563	SUSCEPTIBLE	Susceptible	The growth of microorganisms are inhibited by the usually achievable concentrations of antimicrobial agent when the recommended dosage is used for the site of infection.		Antimicrobial Susceptibility Result
C85559	SUSCEPTIBLE-DOSE DEPENDENT	Susceptible-Dose Dependent	The growth of microorganisms may be inhibited when higher than normal dosages of an antimicrobial agent are used and maximal possible blood concentration of the antimicrobial agent is achieved.		Antimicrobial Dose Dependent Susceptibility Result
C17998	UNKNOWN	U;UNK;Unknown	Not known, not observed, not recorded, or refused. (NCI)		Unknown
