C50466	ATRIAL FIBRILLATION	Atrial fibrillation	A supraventricular arrhythmia characterized by uncoordinated atrial myocardium activation due to multiple reentry circuits with consequent deterioration of atrial mechanical function. Instead of intermittently contracting, the atria quiver continuously in a chaotic pattern, causing a totally irregular, often tachycardia ventricular rate. On the ECG it is described by the replacement of consistent P waves by rapid oscillations or fibrillatory waves that vary in size, shape, and timing, associated with an irregular, frequently rapid ventricular response when atrioventricular conduction is intact. (NCI)	Atrial Fibrillation

C35481	ATRIAL TACHYCARDIA	Atrial tachycardia	Any rapid heart rhythm originating in the atria. Atrial fibrillation and atrial flutter are varieties of atrial tachycardia. Atrial tachycardia is an electrical circuit originating in the upper or atrial chambers. This electrical circuit or focus takes over and generates rapid impulses across the atrial chambers. These impulses are transmitted to the ventricular chambers resulting in a rapid rate. These arrhythmias may originate from a variety of places across the atria. They may exist as an isolated problem or be related to an ongoing structural problem within the heart. (NCI)	Atrial Tachycardia

C71061	FASCICULAR TACHYCARDIA	Fascicular tachycardia	A distinct subgroup of idiopathic ventricular tachycardia (VT) that may be confused with either typical VT or supraventricular tachycardia (SVT). It is characterized by the absence of structural heart disease and classic electrocardiographic and electrophysiological features. It originates from the region of the posterior fascicle (or occasionally the anterior fascicle) of the left bundle branch and is partly propagated by the His-Purkinje network. It therefore produces QRS complexes of relatively short duration (0.11-0.14)s. (NCI)	Fascicular Tachycardia
C71063	IDIOPATHIC RIGHT BUNDLE BRANCH BLOCK VENTRICULAR TACHYCARDIA	Idiopathic right bundle branch block ventricular tachycardia	Idiopathic ventricular tachycardia (VT) is a type of ventricular tachycardia occurring unrelated to any organic cardiac disease. The abnormality is probably congenital, be it a focus of abnormal automaticity or myocardial tissue that can sustain re-entry. The clinical presentation for idiopathic VT can be very much like a paroxysmal supraventricular tachycardia. That is, most patients are generally younger without overt cardiac disease and present with paroxysmal palpitations. Idiopathic ventricular tachycardia is not generally life-threatening. (NCI)	Idiopathic Right Bundle Branch Block
C62253	INAPPROPRIATE SINUS TACHYCARDIA	Inappropriate sinus tachycardia	Inappropriate sinus tachycardia (IST) is a rare form of supraventricular tachycardia involving the sinus node, in which a patient has an abnormally high heart rate, occurring both at rest and in response to stressors (such as physical activity). These include different degrees of conduction delay through the main trunk of the right bundle branch; increased conduction time through an elongated right bundle branch; diffuse Purkinje-myocardial delay due to right ventricular stretch or dilatation; surgical trauma or disease-related interruption of the major ramifications of the right branch (distal RBBB or right fascicular blocks); congenital variations of the distribution of the major ramifications resulting in a slight delay in the activation of the crista supraventricularis. (NCI)	Incomplete Right Bundle Branch Block

The conduction delay is considered to occur beyond the Purkinje's myocardial gates and arises from slow cell-to-cell conduction. The phenomenon is common in patients with acute MI. (NCI)	Nonspecific Intraventricular Conduction Delay

C62267	LEFT ANTERIOR FASCICULAR BLOCK	Left anterior fascicular block	An impairment of transmission of the cardiac electrical impulse along the fibers of the left anterior fascicle. In left anterior fascicular block (LAFB) the posteroinferior regions of the left ventricular endocardium are activated abnormally before the anterosuperior left ventricular area. After emerging from the posteroinferior division of the left bundle branch, the impulse first propagates in an inferior, rightward, and usually anterior direction for a short period of time. This orientation is responsible for the small Q waves in leads I and aVL and for the R waves in leads II, III, and aVF. (NCI)	Left Anterior Fascicular Block
C71040	LEFT ATRIAL ENLARGEMENT	P-mitrale	An electrocardiographic finding suggesting underlying hypertrophy or dilatation of the left atrium. Electrocardiographic criteria used for the diagnosis of left atrial abnormality may include a bifid p wave, a biphasic p wave and/or a p wave duration of greater than 0.12 seconds. (NCI)	P-mitrale
C62269	LEFT BUNDLE BRANCH BLOCK	Left bundle branch block	An impairment of transmission of the cardiac electrical impulse along the fibers of the left main bundle branch, or both the left anterior fascicle and left posterior fascicle. This conduction disturbance is characterized by wide (greater than 0.11s) QRS complexes. The diagnostic criteria consist of prolongation of the QRS complexes (over 0.11s) with neither a Q wave nor an S wave in lead V1 and in the properly placed V6. A wide R wave with a notch on its top (plateau) is seen in these leads. In hearts with an electrical (and anatomic) vertical position a small Q wave may be seen in AVL in the absence of MI. Right chest lead V1 may or may not show an initial R wave, but the latter should be present in lead V2. (NCI)	Left Bundle Branch Block

C62268	LEFT POSTERIOR FASCICULAR BLOCK	Left posterior fascicular block	An impairment of transmission of the cardiac electrical impulse along the fibers of the left posterior fascicle. In pure left posterior fascicular block (LPFB), the impulse emerges from the unblocked anterosuperior division, thus producing small q waves in leads II, III, and aVF. Thereafter, the impulse moves through the electrically predominant left ventricle in an inferior and rightward direction, thus explaining the S waves in leads I and aVL as well as the R waves in leads II, III, and aVF. (NCI)	Left Posterior Fascicular Block

The arterial pressure may be directly measured by insertion of an intra-arterial catheter connected to a transducer. The mean arterial pressure (MAP) can be calculated by subsequent analysis of the waveform. MAP can be approximated without an invasive procedure using the following formula: diastolic pressure plus 1/3 of the pulse pressure, where pulse pressure is systolic pressure - diastolic pressure. (NCI)	Mean Arterial Pressure
C49676	Pulse Rate	Pulse Rate	The rate of the pulse as observed in an artery, expressed as beats per minute. It can be measured at several anatomical sites, including the wrist, neck, temple, groin, behind the knees, or on top of the foot. (NCI)	Pulse Rate
C49678	Respiratory Rate	Respiratory Rate	The rate of breathing (inhalation and exhalation) measured within in a unit time, usually expressed as breaths per minute. (NCI)	Respiratory Rate
C87054	Sagittal Abdominal Diameter	Sagittal Abdominal Diameter	A standard measure of visceral obesity, or abdominal fat, which is measured from the patient's back to upper abdomen between the bottom of the rib cage and the top of the pelvic area. This measurement may be taken with the patient standing or in the supine position. (NCI)	Sagittal Abdominal Diameter
C25298	Systolic Blood Pressure	Systolic Blood Pressure	The blood pressure during the contraction of the left ventricle of the heart.	Systolic Blood Pressure

NCI Code	CDISC Submission Value	CDISC Synonym	CDISC Definition	NCI Preferred Term
C25206	Temperature	Temperature	The property of a body or region of space that determines whether or not there will be a net flow of heat into it or out of it from a neighboring body or region and in which direction (if any) the heat will flow, perceptible by living organism as a somatic sensation of cold or heat. It is a measure of the average translational kinetic energy associated with the disordered microscopic motion of atoms and molecules. Temperature is measured in one of the three standard temperature scales: Celsius, Kelvin, and Fahrenheit. (NCI)	Temperature
C25208	Weight	Weight	The vertical force exerted by a mass as a result of gravity. (NCI)	Weight

C16358	BMI	Body Mass Index	A general indicator of the body fat an individual is carrying based upon the ratio of weight to height. (NCI)	Body Mass Index
C12472	BODYFAT	Adipose Tissue	A specialized form of connective tissue consisting primarily of adipocytes (fat cells), surrounded by a meshwork of collagen fibers.	Adipose Tissue
C25157	BSA	Body Surface Area	A measure of the 2-dimensional extent of the body surface (i.e., the skin). Body surface area (BSA) can be calculated by mathematical formula or from a chart that relates height to weight. BSA is often an important factor in dosing. (NCI)	Body Surface Area
C25299	DIABP	Diastolic Blood Pressure	The blood pressure after the contraction of the heart while the chambers of the heart refill with blood. (NCI)	Diastolic Blood Pressure
