

NCI Thesaurus associations as of August 21, 2009

Association Name	Use/Meaning
Concept_In_Subset	Associates the concept defining a particular terminology subset with concepts that belong to this subset.
Has_CDRH_Parent	Specifies the CDRH parent concept for tracking by CDRH.
Has_Free_Acid_Or_Base_Form	Associates the salt form of a drug with its free acid or free base, which is responsible for the drug's therapeutic effect.
Has_Salt_Form	Associates a drug with its various salt forms.
Has_Target	Points from a drug or other agent to a clinically intended, molecular-scale target. The target value may be a gene, gene product, anatomic structure, biological process, or other concept, where the effect of the agent on the target is thought to be of therapeutic, diagnostic, or other clinical relevance to a disease process. The effect is most often direct, as defined at a molecular scale, but may also be indirect and/or defined at a larger scale.
Is_Related_To_Endogenous_Product	Asserts when there is a relationship or association between the therapeutic moiety and the endogenous gene product.
Role_Has_Domain	Specifies the NCI Thesaurus role's domain.
Role_Has_Parent	Specifies that the NCI Thesaurus role exists as part of a role hierarchy and specifies the role's parent.
Role_Has_Range	Specifies the NCI Thesaurus role's range.
